The new Metrohm 859 Titrotherm applies the unique thermometric titration methods developed by Brisbane base Multitrator Pty Ltd.

Brisbane Based Multitrator PTY Ltd Links Exclusively to Metrohm Switzerland.

Metrohm, Switzerland, the leading manufacturer of instrumentation for Ion Analysis has recently acquired the exclusive intellectual property of Multitrator PTY Ltd, Australia.

Brisbane based Multitrator PTY Ltd gained its reputation with the development of its unique thermometric titration system.

The thermometric titration method complements the existing range of Metrohm potentiometric titrators most favourably.

Thermometric titrations make use of the temperature changes associated with all chemical reactions. They are particularly suited to the production environment where higher concentration ranges have to be determined frequently. The electrode employed is a thermistor which is simple to handle and robust.

Applications are found in all industries, ranging from acid-base and redox to precipitation and complexometric titrations.

The cooperation with Metrohm will grant Multitrator's innovative technology access to a worldwide audience with the support of the world's largest and most respected manufacturer of titration equipment.

With Metrohm's worldwide distribution network thermometric titrations will now receive the much deserved attention.

This is another example of an Australian invention finding it's way into the global market place.

For more information contact:

MEP Instruments Pty Ltd, PO Box 1880, North Ryde 2113, Phone 02 98786900. Fax: 02 98786999

MEP Instruments is sole distributor of leading names in sample analysis technology in Australia and New Zealand. The joint venture company formed by Metrohm Switzerland and Anton Paar Austria provides comprehensive service, support and training for the whole product line of Metrohm, Anton Paar, Applikon, Autolab, Camag, Ismatec, and Retsch in Australia and New Zealand.
